(57) Abstract :  
 Over the decade, advancements in technology have led to the development of innovative solutions aimed at improving the quality of life for elderly individuals. In this context, this project introduces an integrated elderly support system that leverages internet of Things (IoT) devices and technologies to address various aspects of elderly care. Through real-time health monitoring, medication management, and personalized emotional support, the system aims to enhance independence, safety, and overall well-being for elderly individuals, marking a significant advancement in elderly care practices.
